See added new sheet SP06 for enlarged trash area plans

A. Page SP03, the trash truck drive path is in conflict with the uber/lyft pickup/dropoff, and needs to be removed. The recycle/trash truck drive lane must not conflict with other uses, and is free of interference.

- Removed uber/lyft pickup/dropoff. See updated plans that will be incorporated into the project resubmittal.

B. The trash and recycle dumpsters size and number need to be shown in the driveway for pickup. Driver will not move dumpsters from within the building.

- See updated plan

C. A trash/recycle narrative and pickup schedule needs to be included, the number of trash/recycle dumpsters to service each day. Trash plan must include the Townhomes as part of the trash/recycle dumpster service, carts will not be approved for these properties.

- Trash will utilized a compactor and two 2 yard dumpster with 2 pickups a week.

- Recycling will utilize two 2 yard dumpsters with 2 pickups a week.

- Units on ground floor will use dispose of their trash & recycling in the buildings north trash/recycle room.

- Trash dumpsters will be moved to the pickup area prior to that days pick up from the interior Trash Rooms.

D. Recycle dumpsters are not marked on the site plan.

- Dumpsters are labeled "T" for Trash and "R" for Recycling

E. Truck radius shown on the plans does not reflect actual turn radius requirements of a front load truck. Route may not be feasible with dumpsters pulled out for service. Revise truck radius to reflect actual conditions.

- Trash truck diagram has been updated and clearances increased.

Additional comment received on 3.1.2018 to add this note: Building management will be responsible for placing the dumpsters so that the driver does not exit the vehicle to move them, and so they are safely serviceable.

- Note added to new Sheet SP06

Thank you,
